

## Day 6-Staging Environment Setup

On Day 6 of the Hackathon, I am staging the complete marketplace by deploying it on Vercel. The deployed link is given below and you can check it from there.

<https://the-brands-bazar.vercel.app/>

I have listed steps on how I Staged my project using Vercel and Github

### Steps Taken:

1. I checked my project for errors and issues by running my project on build server.
2. I pushed the updated files on github.
3. After the project was all in my github repo I made new project in Vercel by connecting Vercel to github.
4. In the new project I seted up the environment variables of the marketplace in in vercel and deployed the project.
5. After the deployment I connected my deployed project with my Sanity project so it is able to fetch data.
